Got any signal up here? Nokia to build mobile network on the moon

After recently winning a bid with NASA, Nokia has some big plans. They are planning to build a 4G communication system on the moon. They looked into 5G, however the consistency and reliability from 4G outweighed the potential speed benefits. This network is expected to have construction begin in late 2022, followed by NASA sending humans back to the moon in 2024.

- What is Nokia planning to do that is pretty *out of this world*? **Building a 4G network on the moon**
- When does NASA plan to send humans back to the moon? **2024**
